Work History

Software Engineer | (5/2023 - 12/2023) | [LassoMD](#) | Toronto

Built a comprehensive solution from scratch to elevate dental practice's patient acquisition and lead management. Seamlessly integrating marketing ROI analytics, lead flow tracking, online reviews, and real-time appointment scheduling.

- Key Contributions

- Integrated Twilio to handle Calling & Messaging service
- Built an internal dashboard from scratch for analyzing SEO performance & Core Web Vitals
- Integrated Typesense Search Engine for fast and accurate data retrieval

- Duties

- Worked closely with the client success team and sales team to understand the pain point of the current market and how we could address the issue.
- Pushed changes and releases weekly and requested comments to ensure the product is on the right track from the view of stakeholders.
- Designed data models and pipelines to ensure a reasonable data flow without compromising performance
- Integrated PubSub to break large applications into smaller but more maintainable services
- Maintained environment and deployed applications to Cloud Run with TerraForm
- Wrote Pact test to prevent unexpected changes that will break existing features.

- Tech Stacks

- Backend: Python with FastAPI
- Frontend: React with Typescript, Tailwind, Radix
- Testing: Pact Test, Jest, Pytest
- General & Infrastructure: Next13, Vercel, Docker, PubSub, Terraform, GCP, Postgresql, StoryBook, Graphite, highlight.io, Github, Loom, Confluence & Jira

Full Stack Developer | (11/2020 - 09/2022) | [SCMP](#)

- Key Contributions

- Independently implemented LiveBlog feature enabling editors from different countries to work on ongoing topics simultaneously without duplicating work.
 - [Sample article built on this feature](#)
- Boosted development speed by 50% by adopting CompositionAPI and migrating from Vue2 to Vue3.
- Replaced Drupal with our solution to **save 760k USD annually**.

- Duties

- Designed and developed an **Event-sourced** backend using **CQRS** architecture, ensuring high availability, scalability, fault tolerance and instant replay of previous edits.
- Established and managed **RabbitMQ** to publish/subscribe updates for effective communication between asynchronous systems.
- Revamped the workflow of **WebSocket** to tackle race conditions.
- Teamed on **user-centric design strategy** in translation of **UI/UX** and business requirements into coded solutions.
- **Reviewed codes** from other peers and offered technical advice or solutions.
- Investigated unusual CPU spikes in **Kubernetes** cluster to prevent unexpected downtime of applications.
- **Integrated and maintained** third-party services such as Google, YouTube, and Twitter.
- Built **automated test suite** and script for **CI/CD**.
- Optimized performance of service & database components.
- Participated in user story analysis, solution design, and task allocation among teams.

- Tech Stacks

- Backend: Node.js with Express, MongoDB, RabbitMQ, Event sourcing, CQRS
- Frontend: Javascript with Vue.js & React.js, Typescript, Material UI, HTML5, CSS, Vuetify
- Testing: Python with Pytest, Javascript with Jest, Sinon
- General: Docker, Kubernetes, CI/CD, Restful API, GraphQL, Git, GitLab, GitHub, Jira, AWS(EC2, S3), Socket.io, Vuex, Redux, WebSocket, rate-limiting, Microservice, JWT, Web development, npm, Responsive, Babel, Webpack, OpenAPI (Swagger), Postman, VSCode, non-relational databases (NoSQL), Google Analytics

Software Developer | (01/2019 - 10/2020) | *Prisec Limited*

- Key Contributions

- Designed and built an authenticator on top of **OIDC** protocol for hassle-free registration and login, while maintaining user anonymity.
- Implemented a highly efficient **Python WebCrawler** capable of automatically fetching and filtering **millions of rows of targeted data** daily, allowing easy analysis and processing.
- Developed and maintained automated test suite for any proposed feature changes, ensuring high-quality code and minimal bugs.

- Tech Stacks

- Backend: Golang with gRpc, GORM, MySQL, Python with Flask, Redis
- Frontend: Flutter, Dart
- Testing: Python with Pytest, Selenium
- General: Redis, Docker, Kubernetes, CI/CD, Restful API, GraphQL, Git, GitLab, GitHub, Kanban, Test-driven-development, Micro service, DevOps, relational databases (SQL), Linux, Ubuntu, Single Sign-On(SSO), OAuth2.0

Education

Bachelor of Engineering in Information Engineering (Class of 2019)

[The Chinese University of Hong Kong](#)
